

GWT Action Sequence Designer

- PDS is growing moss
- New project - “pentaho-asd”
<http://code.google.com/p/pentaho-asd/>
- Notable features/goals
 - edit action sequences in a spoon-like way
 - action sequences represented by lightweight object model - allows transport to thin client
 - GWT service serializes model to proper .xaction format and saves it to a solution folder
 - runs in PUC
 - automatically discover new Actions (BI Components) and be able to edit them
